Rev. William Gill and natives waving to occupants of an unknown craft in New Guinea, in June 1959. R.A.A.F. investigators could not reach any positive conclusions.

**SEVEN HUNDRED HEAR REV. GILL IN BRISBANE**

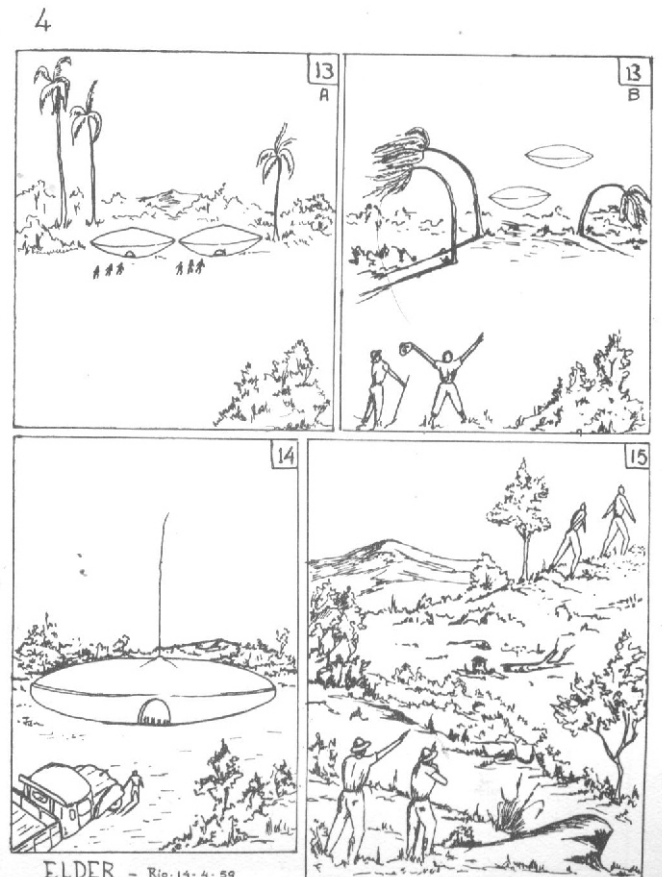

Over 700 people attended a public U.F.O. Forum held at the Brisbane City Hall on September 6, 1961 to hear guest speaker Rev. William Gill, especially flown in from Melbourne, recount the New Guinea sightings of June, 1959.

Sponsored by the Queensland Flying Saucer Research Bureau, the Forum was a novel event in the history of Australian U.F.O. research.

Mr. Stan Seers, the President of the Bureau, introduced the Chairman of the panel - Mr. Hugh Cornish, a leading Brisbane T.V. personality. On the panel were Alderman Ferronei White of the Brisbane City Council, Dr. G.P.K. Naylor, Lecturer of Psychology, University of Queensland, Mr. William Tuckey, a journalist from a Brisbane daily newspaper. The Bureau was ably represented by Mr. R. Royal, Secretary and Mr. R. Russell, Public Relations officer.

Rev. William Gill approached the subject with touches of intimate humour, then presented his data in such a tidy, analytical manner that the most stubborn sceptics had to reconsider their opinions. Although Mr. Gill has the ability to hold his audience, he does not talk past his point - which is to say that they saw four figures on board an unknown craft on two consecutive nights, that they exchanged hand signals with these figures and that they saw these craft come and go from out of the sky at fantastic speeds. No theory as to their origin was discussed, nor any views offered by Rev. Gill at the time.

The consensus of opinion of the panel was that UFO's did certainly exist and that they could have only come from another planet, either within or outside our solar system. Dr. Naylor told of a strange light he and his wife had seen some years ago and which, in his opinion, could not have been of terrestrial origin.

TEXT TO THE REPRODUCTIONS AND SKETCHES.

1-a, b, side view resp. uperview of the craft reported on page 1; 1-c, the 2 rooms, A.V.B. had been in; -d, the seringe; -e, the foot steps; -f, the trace of the poles. (All sketches done by A.V.B.), f-sketch (by M.P.A.) of the position of the house and field, g-sketch (by M.P.A.) of the house, in reference to an earlier F.S. event. (read on page 4)

2-a, sketch of the luminous object by the teacher; -b-the electric light bulb, - c-the shade; - d-the phone and the chandelier (read page 6); e-luminous (electric) phenom. photogr. by D. Gerolami (INCOM), July 25, 59, over the Quirinal at DeGaulle-Pres. Gronchi meeting at Rome (by courtesy of Dr. Alberto Perego).

3-a, from Flying Saucer Review-Australia-Box 32, Toorak, Melbourne, Vic.-Australia, in reference to the June, 1959, F.S. sighting by reverend Father Gill and the 38 witnesses of "4 arm waving spacecrews, on deck of a F.S."; b-the report of the Review related to the panel.

4-reproduction of a sketch in SBEDV nr. 9 Bulletin, remembering BRAZIL'S cases of Saucer crews, seen at that time, by more than one witness. (13-A and 13 B): by two witnesses in Cresciuma-Araranguá Nov.18, 57, when 6 crew members would mount two grounded S. which would ascend in a big woosh, when even the palms curved earthwards; 14- two people in a truck that got stalled at night, Oct.10, 57 when overflown by a F.S. and saw with aw, 7 childlike crew members, who filed off, on a door like structure, of the S., looking silently down at the panic stricken truck drivers, when the S. kept still floating in the air for several minutes; 15-is refering to two giants, 3 resp. 6 m. tall, dressed in brilliant red clothes, going upwards a hill, with the back to the 3 witnesses, at daylight, near Minduri, at August 58 (report checked by a SBEDV member, read also about the 3 reports in SBEDV Bull. nr. 8).

5- a-1, and a-2, aspects of part of the chunk of metallic sheet found at Pirau ba; b-its hinge; c-its rivet

6-a, Cantagalo metal analysis; b-the sheet; c-the hill it was found; d-Abilio Morgado the farmer. (Courtesy Dr. Martinho Barros).

7-other sheets at the Airforce.

CIPEX e GENA

8-a, range map of chart "Cape Carnaveral-Minas Gerais, Brazil"; b-Chart of the Minas Gerais range quadrangle, littered by missilery.

9-sketch of "Dominca del Corriere" (28 Gennaio, 62) illustrating the Catamarca-Argentina F.S. event. (Courtesy Dr. A. Perego).

10-sketch by SBEDV's Mario P. Aquino, of the boiling see waters (during a long time), where a smoke throwing object had fallen 2 miles from the ship in the see, observed (the smoke and boiling water) from the bridge by com. Fradique de Carvalho, who didn't insist on an approach with his ship "Itaguaçu", specially after a rain fall was dissolving the "marker", a trail of smoke over the boiling sea (sketch following the words of the commander and O Globo, Feb. 26, 62), 200 miles from the Bahia coast with a 3000 m deep sea.

11-A, snapshot of Dr. Alberto Perego, a world reknown F.S. research personal, at Corcovado mountain, Rio, when his ship stayed for a few hours in Rio harbour. Few have had such a good view behind the stage of F.S. research as learned diplomat Perego, a charming, enthusiastic person with vast culture and a great learning. We hope he had a good trip home and has got DINO'S "A Orbita da Terra e a Gravitação", we have sent him by air.

12 - At "O Cruzeiro", SBEDV's Mario Prudente Aquino, João Martins, the Editor.

\*

May a scientist do what he wants to do? In a fine article "Flying Saucers (F.S.) are politics", its author, John Lade, in the Flying Saucer Review (Mar-Apr 62, Doughty nr 1 Str, London W.C. 1, England) points to the unscientific elements in F.S. research, which should leave it alone, so that "orthodox science" could take over (\*\*). (and make then it respectable, eventually, after 15 years of ridicule). SBEDV's Editor questions the feasibility of science to do this, since a) - there is little concrete material "left" for scientists for exam.; b) - there is a lack of interest of our scientists in regard of the F.S.; c) - pressure is put upon scientists, so as to keep their work and results secret, when dealing with the F.S. problem. aa) - Few photographs or waste (or other) material from F.S. is available, since commonly its taken in custody by the tough guys from the Airforce (or navy) Secret Service (Campinas-São Paulo, 1954 tin sample) also with some civilian "first comers in F.S. research" connected to "confidential committees" (in one case in Brazil openly connected to the USA Airforce Secret Service-ATIC). Since a scientific experiment supposes the same results the world over, if repeated, this may not apply to the small quantities available of F.S. waste, only published (to our knowledge) in one case (\*\*\*) and also there not checked (publicly \*\*\*\*).

bb) - A scientist, living by the fame of his name, is more exposed to vulnerability of his "vanity" by the ridicule, artificially produced by the press (and economical and state agencies which influence it). Not so, a simple person, with nothing to loose, may even occupy himself with a matter stamped "ridiculous".

cc) - Most big instruments, needed for research in Ufology, are institution or state owned, so as spectrographs, aero-photo-grametric labs, astronomic observat. etc. Expensive and long trips, to enquire "in loco" about a contact case and the past of the witness, would be too expensive for a psychologist, as a part time "pennyless hobby". Economically, therefore, scientific independent Ufo research, is as nearly as impossible, and all "governmental supervised", and therefore secret, since under the USAF spionage law, and also agencies of other countries, are supervised when "subsidized" by the latter. Who is the grey eminence behind this all? J.A. Wechsler from Washington's Post (Feb.5,62) called our attention upon the influence of the oil industry over the USA Secret Service (CIA) and "its man" John McJohn (Diar. Not.-Rio Mar 3,62). We recall that the danger of "military-economical" pressure groups had been mentioned by Pres. Eisenhower in his fare-well speech, quoted also by Pres. Frondizi from Argentina, when the latter made a plea to the new Pres. J. F. Kennedy, in regard of the pressure suffered by him by the "gorillas" (not to confuse with NASA's orbiting learned apes, gullible but easy to please)

(\*) U F O for Unidentified Flying Objects. Unidentified, since the military are afraid to identify as a superior "uncontrollable" power, since then earthern Brass could then get bread-less.

(\*\*) So it would seem ridiculous to us when a trained M.D. would be frightened away from his work in the Congo, by the activity of some medicine quak and wocdoo doctors. The same way we feel it not justified when research personal should run away from Ufology only when some one have a psychic approach, do it in a juvenile manner "chasing the Saucer and Deros and Teros", do it in "supernaive" way, speaking of CIA jokes (Leo Davidson), space-animals (Trevor James) or Hitler's hidden S. factories (Richard Ogden), even if this sometimes may be done intentionally (related to silence group) to sow confusion. Otherwise do we agree with G. Baker in condemning the truggery by thinlipped mobsters as mentioned in his book.

(\*\*\*) Dr. Olavo Fontes' Ubatuba magnesium sample (completely pure, with another density of our known Mg.) got deserved world publicity.

(\*\*\*\*) The results of the analysis of pieces of the metal sent up to USAF and APRO (SBEDV Bull. nr. 22/23) never were turned public, in details.

thuggery

What's on in Ufology? Washington's maj. D. Kehoe (Nicap Jan.Feb 62) admits bluntly that research in Ufology should be done on a "patriotic base, only in the state (government) best interests". (\*) We do not know if Editor Kehoe considers, that there may sometimes exist, a collision between the state interests and truth (and therefore perhaps Kehoe's hostility to contact cases and the publishing of F.S. waste analysis; SBEDV Bull. nr.22/23; 21; 19/20). AECS' Ogden comes to the major's point of view when stating (Time, Ap. 20,62) "You have) to do what your country wants done". However, if considering the past of mankind, one may consider the distorted twists, done in the "interest of the country" as the crazy "common sense" of Middle Age so as to burn (a live) the "unpatriotic unbelievers". In our time, Stalin put them to death with a shot in the neck or let them rotten away in slave labour camps and Hitler transformed "the unpatriotic ones" in soap. Recently (J. Br. Oct. 17, 61) Roberto Kennedy (the Presidents brother) and Edward Murrow called the attention to USA's extreme rightists, also "super-patriots", who by spying on their neighbour (countries) etc. etc.were as dangerous as communists. Therefore in Brazil, the expression of "common sense" may be opposed by "bom senso" (good sense) and this therefore may, explain Brazil's aversion to perform the "wiggeling wavering tail" (caudatario) of military power-blocs as told by the Foreign Ministry (J.Br. Ap 17, 62). Since also military help is supposedly not used to pervade and supervise (\*\*) other countries secret services, it therefore could happen, that in the future, Brazil may be able to have a policy of its own, in the "public" approach of the Flying Saucer problem, since the brasilians are alert, fighting against ignorace, struggling for evolution and truth. Also its military circles may accompany civic evolution, even if this should lead ...to peace on earth ... and in space.

F.S. - Statistics (Jan. to Apr. 62): \* At <sup>3</sup> Argentina, Jose A. Felipin (O Jornal Rio, Feb 27, 62) when arriving at 3 A.M. at Catamarca (where he lives on rua Casebros 493) with his truck (nr. 3812) and his companion Nabarro, let it be (known that they had met F.S.Floodlights from above, shining on the truck and when they stalled the truck for investigation, the lights vanished but near the village Amadores those lights returned, connected to one F.S. which landed a hundred meters away from the river Palin. When the S. was focalised by the headlights of the rtruck, the former ascended instananteously and also its super-structure "(omni)buslike" could be seen. Later, on, two F.S. could be seen, flying in zig zag, when separating for different directions 10 km from Catamarca, at La Bajada, once more one could see the F.S. flying in zig-zag, with the brilliance and speed of "meteoros". Police of Catamarca returned with the drivers for investigation and (lookhere!) near the bridge over the river "Vale" a F.S. returned and descended smoothly near the spot "Loma Brava", 3 km from Catamarca. The "inspector geral", Pedro Tolosa, in confirmation of

(\*) - We guess that if Napoleon should re-incarnate in our time and of he caught an eye on the major's lines, he for sure would take up Mr.Kehoe's idea and he would call communists, all those people who should dare to be opposed to his own goals and philosophies.

Also one may call the attention that we take the iron curtain as an insult but nobody gets a fit (by patriotic reasons?) when it comes to focus the corrruptive pressure on science, on military, diplomatic and press services (in our own ranks), also sometimes by a "finacially compensated pro-labore", all this to keep a "gilted stainless steel curtain" around the F.S. problem.

(\*\*) - Since spacecrows on a whole have proved peaceful the last 15 years, even not attacking us in spite of their superiority, they may respect perhaps our free will, sort of God abiding, which would explain totalitarian Russia's hostility in reference of the F.S. problem (SBEDV Bull.21) putting it up as spy and softening work by the enemy in the cold war. Not so in the West, with its "pillars of liberty and democracy" in colision with silencing, never theless, some minor advisors, out of cristian charity, may be trying to

(continuation)

CIPEX e GENA

the sighting, said that he would return next day to the landing place, looking for traces on the ground, from the previous cosmic landing ("aeronaues siderais"). See sketch about the event on page 2 (it. 9).

At Mexico City's airport (Diário Popul. S.P. Jan 4, 62) at Jan. 3, 62, a F.S. "with metallic reflections", during 17 min. made evolutins at great height, in zig zag, also ascending and descending.

At Brazil: Dona Lucia Machado de Almeida (U.H.-Rio, Feb 19, 62) tells about the report, made to her by a lawyer. The latter, together with all his family, from his house, near the lake shore, could see at large, during 15 minutes, at night a 50 meter large luminous F.S. (intense luminosity) as 2 soup plates put together which was oscilating suavely near the water surface. Suddenly, in a straight line it would ascend and disappear (in a second). Miss Lucia adds: "...when the certainty of the excistence of other inhabited worlds will get known to the common people... then man will understand his stupidity and uselessness.... in making wars..."

At Santo Antonio - Belo Horizonte (Minas Ger.), Geraldo Barbosa Fortes (U.H. Belo Hor., Mar 17, 62) a radio technician at March 8, at 10 pm saw together with friends a gigantic, spherical, silvern object, at low height, which would move fast and change direction, leaving a bluish trail (like long hair).

At Itatira (Ceará) at Apr 16 at 7.40 pm and at Apr. 20, 1962, at 8.50 pm (Diar. Not. Rio, Apr. 27, 62) Wandick Ponte could discribe details of a F.S. he had seen at his farm.

Near Araguari (Minas Ger.), Osorio de Oliveira, toguether with wife and sons, when on the road on way to his sister's farm, near Araguari, at 7 p.m. could see a F.S. at a distance of 30 meteres. The F.S. was floodlighting his car and so he brought it to a halt, to observe better the F.S. (Diar. Car. Apr. 17, Diar. Min. 17, Apr 62).

(\*\*)- Conclusion

... protect us from the rough reality of extra-earthern superiority, which hurts their soft merciful minds. So as the sensitive skin of termites and worms need protection against the scathing rays of sun, the same way, delicately balanced minds, need mental institutionalisation or a intricate set up to protect their soul and courage against rude truth.

Four years ago, we got to know about a contact case, when a secret service in Rio occupied itself with this matter but only now we were able to localise the witness 4 years later, 1.500 km away (36 hours, 5 buslines, one ferryboat) from Rio and 2 SBEDV men (Dr. M. P. A. and Dr. W.B) had the luck (\*) to speak with the young intelligent farmerson, living (5 km) near a tiny village, deep in Brazil's hinterland. To meet us, he came at horseback to the village and after settling down, showed most reluctant to speak about his 4 year old experience, he even hadn't communicated to his own parents and brother, since the event was so strange that it made him reluctant. Also when he had come to the Capital on that earlier date 4 years ago, to report his event to a person known as a reporter about F.S., he then got the explications "that it was useless to speak up publicly about his strange experience," "by lack of concrete proves", "even so, we violently disagree about the latter, since there were several circumstances, as told at the end, that could have corroborated very much so to endorse the report of the young and earnest man:

Since Dec. in that region of the country is rather a hot month, A.V.B, and his brother, were plowing the tilled plains, near a river, at night time, so as this was less hot and dusty at that time, that is aprox. 14 Dec. 1957 at 11 p.m. specifically (4 and a half years ago). A. called his brother's attention upon a light, which would change position, each time they turned the plow. When the light got nearer, out of fear of the brother, they desengaged the plow and went home on the tractors back. Next night, A. was plowing alone, and it happened at midnight that a "star like light" approximated from north in great speed and after minutes it came to a stop at the height of 100 meters over the field, but A. still continued in his work of plowing. Then he took the resolution to leave for home and tried to desengage the plow from the tractor by the hydraulic gear, but it failed ...

Then the tractor's motor went dead also and at the same time he saw the landing of a machine near by (15m) with two person coming running out of it. A. then speedily jumped on the fender of the tractor and then to the ground, so to run away, when he was grabbed by two men from behind, and he succeeded to hurl one over himself, but after freeing from that one, two more people and then 5 to 6 were hanging on his arms and feet and being dragged to the machine, up a 3 to 4 meter high ladder and through a door into a (round) room 1,7 or 1,8 m high and 2 m large (page one, 1-c) (see sketch) with an axis in the middle from ground to ceiling, protected still by an outer wall (with quadrangular holes in it, so as seen in electric installations), a 0.8 high x 1 m large, fixed table in form of a tripod with an instrument laying on it ( we were asked by the specific Rio reporter not to describe it, since by this means he could check on other similar reports, if those should one day come in). A sort of sucking flexible seringe (look sketch 1-c), was applied on two spots besides the proeminence of his chin, for drawing blood, (A. thinks) then all his clothes were uncredibly speedely undressed, even so using the buttons, without tearing the cloths. Even so (we asked about) A. had violently resisted at the beginning, when grabbed, he soon got a feeling that even so physical power of the men was smaller as his own, there was no use of resistance, and he better submitted voluntarily. Then he was (through a door) conducted to another room, with a couch as the only furniture, covered with sort of plastic. Laid upon it, his body was moistened by sort of sponge with a refreshing liquid, A. thought first this was to clean

(\*) - research should be done on the spot by personal of the F.S. Societies so to probe also the psychology of the witness and his past. As seen in this case, the work done by secret services has had no use for the general public. Also it had been overheard in a deformed form. We have waited 4 years, still we could do a good research, in the name of truth, against the confusion mongers; as this has paid off nicely; by interviewing personally the person engaged in the event, and are for this very tankful to our Rio Reporter.

him, since he had been pretty dusty from his work. If he had been 5 min. in the first room, he then was left waiting 20 minutes in the second room, even so nobody bothering him, he felt soon nauseated by the pungent smell inside the rooms and therefore he vomited copiously. When the door which was leading to a third room reopened, a complete naked girl 1,4 to 1,5 m of stature entered the room and was left there alone with him, when the two men that had brought her in, left her. The (sliding) door closed and the girl immediately approached him smiling with open arms, embraced him, drawing him with clear intentions to the coach and apparently also with pleasure. A. afterwards was puzzled, since moments before he had felt terror and had been nauseated earlier, and all the sudden he should have forgotten all this?(on an after-thought he would all this, and his excitement have related also to the liquid applied moments earlier on his body?) Recalling it, the girl had sparse blond hair, no eyelashes he could remember and also no cilium, or only very fine blond ones and no hair on her body. The ear was small, chin, lips and nose fine, eyes chinese like, cheekbone prominent (slavish?) teeth white and well formed, her weight he would have guessed it as 35 to 40 kg. Afterwards, without having spoken to him, the girl left (we couldn't ask too much questions, since the man seemed reticent and blushing, rather without experience, (even so he had got married by now, (July 61) and when she was approximating the door, this automatically opened, even so he couldn't guess the mechanism for it. He then re-entered the first room, to get his clothes and get dressed, when he was joined by a crew member who went with him outside around the ship on a platform which was on the level of the door. All he could see now calmly was: altogether he had seen 5 to 6 crew members, all clothed alike, in close to the body fitting white suits of metallic scales (he even had got hurt on his hands by the scales on the previous fight), with a large girdle which had a green light in front, the foot was enclosed in rough white shoes (apparently without heels, as the traces showed so on the next day, on the plowed soft ground) hands were covered by strong gloves and the head by a big helmet. leaving only a small horizontal gap, on the spot of the eyes, the latter, which couldn't be seen, by lack of transparence (he couldn't see eye to eye) and from behind a metallic, large, but compressed tube like metallic structure, would lead to the helmet, emerging from a small lump which the crew showed on their back. The men didn't speak to him, but only amongst themselves, in sort of a strident (husky?) language, neither sirian or japonese (he knows the sounding). All were of small stature (shoulder height) but the girl still had been smaller (A. was probably smaller than ourselves of 1,7m).

The machine had landed 40 m from the river, cutting the tractor from his home (3 km. away see sketch 1-f), by the way of the landing (there would have been no use to call for help). He didn't know the origine of the light of illumination in the interior, neither on the outside, the machine, a bird like construction 2 to 3 m of height which was standing on a 3 to 4 m high tripode (1a, 1b), (with feet 30 cm large but still larger was the piece in contact with the ground, 1-e) with its mainbody (15 to 20 m long) with sharpened in front-piece, with a green light on it, two shorter parallel proberances with an orange light near their sharpened protuberances Laterally on the main body, on each side, a short, half meter plank protruded, normally in horizontal position, but made a small (30 degree) turn, when the machine started upwards for its flight, afterwards. Above, but still close the mainbody, e a 0,4 m thick, 9 to 10 m large cupula was rotating constantly, also with the craft on the ground, producing sort of wind, felt by the bystander, which increased sharply to storm-like intensity, when the flight began (withought heat or smell). At the end of the mainbody was a vertical plate, (rudder like). After the inspection, both. A and his companion, descended the (retractable) ladder and on the ground, the crew with his finger made two holes in the ground, pointing to one and then skywards, then to the other and to A. (A didn't get the meaning).

Then he began leaving the fast, the craft would which ascend, as he could see, also when the green front light changed to a bright offuscating white light, the only one which was then visible after the craft left the ground, which was done in a

incredible speedy manner disappearing fast. A. still felt nauseated when walking homewards, and still felt a "painful liver" the following 3 days, when small superficial ulcers would appear on his face and arms, but heal immediately. Also when he looked for his tractor the next day, (see sketch nr. 1-f), this would operate perfectly, and the traces of the shoes of the shoes of the crewmen (without heels) and the spot where the tripod of the machine had stood and left an impression on the soft plowed earth (\*), could still be seen (which in the Edit. opinion could have favoured the proves for the contact). Also the marks on the chin, where the blood had been drawn stayed there for more then 3 years, visible.

A. informed that he hadn't talked to nobody, (with one exception) about the event, even so his house had been floodlighted twice at nighttime several months, months before, when this had been seen by his mother (1-g,m) and also 3 months before, all the court of the house had been flood-lighted from above, as seen, by A. and his brother, from the room, where both were sleeping. (sketch by Dr. Mario, 1-g-AVB).

Also people at the village and neighbourhood, at several occasions had seen "those lights" at night-time. A. told us when asked about, he wasn't wishing to renew his experience with the craft "since it had been rather frightening, and also had got married by now and therefore..."but if it should happen that the same craft, with its crew landed once more, he wouldn't run away.."

SBEDV Editor, instead of a remark has the following questions on his mind: "1-Had the drawing of blood of A. something to do with his later meeting of the girl?, 2-Had the previous (months before) illumination of A's farm house, something to do with his later experince?, 3- "hich was the reason for meeting the girl? (a-to activate the gens and chromosomes of another' planet's race, by a stronger earth race?; b - just to make a complete physical "check up of an earth-man"?; c-just to show earthmen that physiological conditions in other planets are identical?: d-just to establish an interplanetary parent-ship for later political or cultural relationship?; e-just because the girl wanted it so done by her whim, since she had an hierarchical ascendance over the rest of the F.S. crew?

CIPEX e GENA

\* \* \*

A "MICROSAUCER", spybeam, or focused radar beam from a F.S. at Rio? (at Jan. 16-1962).

An elderly lady, schoolteacher from profession, was talking over the phone, at the evening, with the wife of her doctor (SBEDV's Editor got in contat with the lady by a colleague), when she interrupted suddenly the conversation with the words: "I have to stop talking, since a big luminosity is pervading my apartment". After some minutes she resumed her talk with her friend over the phone, and told the following event which had taken place at her apartment, at that specific moment, which some days later was also by herself, reported to SBEDV's Editor (corroborated by the two maids) when the latter paid a visit to the lady's apartment, and was well and friendly received."

The lady's 21 year old maid Dina with 8 year in her service, inteligent and honest) was standing near by the dining room window, when a submarine like, slender, luminoues, 40 to 50 cm long object, had entered the window, through the passage, left by the window's shade, which was inclined about 30 degrees outward. The object passed her swiftly on a aprox. 1,5 m flight level (above the floor) in direction of the about 3 m away communication door to the entrance room, where from(the latter), the lady was sitting ( in the entrance room)

(\*) - It so seems to the Editor, that by a rough calculation, by comparison of the impression left upon the ground (at the same... plowed..ground) by a known weight, one, could eventually get to the conclusion, about the weight of the machine, supported by its tripod; which had landed there, previously (of unknown weight until now).

and numbers on them, began to fall from the sky, preferently in the evening hours (7 to 8.30 p.m.), and in two cases (Cantagalo and Pirauba) one could even see a 20 to 25 m long luminous body (in the former case) which would explode before touching the ground (a hill in the former case) with one big and two smaller bangs (in both cases) and then desintegrate. So since there had been the speculation about the presence of F.S. in the beginning, SBEDV got mobilized in the person of Dr. Mario P. Aquino who visited two of the spots, (Pirauba 700 km from Rio and Cantagalo) doing local inquiries, bringing back a piece part of a 2 m large (1,5 mm thick) plate, with a hinge on it (fig. 5a, b) and an interesting (unknown for us) rivet (see fig. 5c). Without financial help from agencies it was an effort of SBEDV also in time (50 to 60 hours on the road) to identify quickly the procedence of the fragments, which in the case of Cantagalo were analyzed by the Instituto Nacional de Tecnico-logia, and by courtesy of its Secretary, Dr. Jaime Santa Rosa, and Dir. of metal. Div. Dr. Arnaldo H. S. Feijó, SBEDV members could see the identity of fragments of Cantagalo (analysed see fig.6a) and those of Pirauba (also they fall down at different days) in possession of SBEDV. When a digest is made of the longer report of Dr. M. P. A. in the form of a table and one computes the paper clippings the following conclusion are drawn

<u>TOWN</u>	<u>FEBR</u> day	<u>HOOR</u>	<u>IDENTIFICATION</u> marks	<u>SPECIAL OBSERV.</u>

CIPEX e GENA

All the 5 towns are inside a relat, small (110 x 80 km) quadrangle (look map 8-b) which is about 6.600 km away from Cape Carnaveral, look up map 8 a (now with out the tracking stations of Brazil's Fernando Noronha). The precision of the shots in reference of the distance would then be a pretty good one (0,8% deviation). If the shots came of Point Mugu, P. Arguello, Vandenberg or White Sands (Time Apr. 13, 62) the distance would have been even longer. As some-ones suggested in the dailies, the pieces to be of Glenn's Atlas. This doesn't seem so, since, as it was explained to Dr. Mario In Cantagalo, the missile" came in "pretty low" and also not at all the 4 days an Atlas had been sent up in Carnaveral. Also it doesn't seem to have been a "metereological balloon" as interpreted by U.S.A. attache (J. Comercio Apr. 5,62), Dale Kalb, even so the latter never saw a missile yet and doesn't know how it looks. Brrig. Armando Perdigão thought about a missile which deviated from its route and was destroyed for this reason, but this seems invalidated by the northern course, seen by the alligment of all 5 twons on the map, and also since it happened 5 times(\*) Airforce'public relation off. maj. Aloisio Nobrega thought no danger could arise from the "iron rain", even so it seems that in case 1, (Mar de Espanha), nearly a man was killed (which fainted possibly by the concussion).

The result (fig. 6a) of the Cantagalo piece disclosed in % carbono 0,13; Sili cio 0,43; Manganes 0,56; Fosfor 0,022; sulfur 0,028; Cromo 17,20; Niquel 6,81 Molibdeno 0,18, This analysis of a stainless steel reached SBEDB by kindness of the Institute's personal and therefore, once more SBEDV is very thankful, since it sincerely appreciated it.

(\*) On 4 differents days.

MISCELLANEOUS: Brazil in Space at the World

Brazil's Geraldo de Carvalho Silos at UNO has been elected coordin. for "Peaceful Purpose of Cosmic Space Committee" (o Jorn. Jn 7, 62) and inspected Cabo Canaveral "Space-Flight's Base" at Aprl. 16 (O Dia-Apr.29,62). Gilberto Amado elected for the Internat. Law Committee.

The Internat. Congress Of Aeronautic Engeneering, Cibernautics, Space Medicine, as also a bras. exposition of Aeronautics will assemble in São Paulo-Brazil in Dec (Diar. Not feb. 18, O Globo Feb 19,62) under the coordination of ambassador Carlos Alfredo Bernardes.

CIPEX e GENA

People on the move (Have been, are or will get interested in F.S.): adm. James Quinn, ex USA navy attache in Rio, invited adm Ary Rongel (U.H.Rio, Feb.20,62) to New Orleans (with Zaven Boghossen, Ivan Serpa, Manuel Inacio Vieira) being receptioned there by adms. Georg W. Anderson, Burke, Nims and cpt. Blenman Jr. ...To the Bras. Milit. Committee at Washington went maj. Bernardo de Luna Freire, March 8, 62 (Est. S.P.); also to Wash. as bras. Attache moved airforce cel. Artur Carlos Peralta at Feb 23 (Corr.Manhã, Feb 24, 62).

Brazil in Space at Home: By adm. Otacilio Cunha (Committee for Research, recently returned from USA.) Gocnae (Group of organising the national Comission of Space Activities) was constituted Jan. 22,62(U.H.Jan 22,62) at Marechal Camara Avenue 350, floor 6, with Cel. (airforce and Dir. Tecn. Aeron. Center São José dos Campos) Aldo Weber Vieira Rosa\* (planning a NASA base up on the Amazon-Amapá- O Globo, Jan.15, 62)\*, from CNPq) adm. Amauri Costa de Azevedo Osório and profs. Bernardo Geisel, prfs. Almir Mauricio (Institute milit.Engenh.), Artur Moses (Pres. Acad. Science) Lélío Gama (Dir. Nac. Observ. Astron.), Luiz Gonzaga Bevilacqua and engens. Pedro Tomas Bun\*\* (São Paulo, Interplan. Soc.), maj. Lincoln Bittencourt, cel tt. airforce Sergio Sobral de Oliveira.

By ABEA (Sociedade do Direito Aeronáutico) in cooperation with the brazilian Airforce was created at its Ministry at Ave Mar. Camara the "Committee of Interplanetary Law" with pres. João Vicente Campos, vice-pres. J.M. Oton Sidou, Paulo Ernesto Tolle, Haroldo Valadao, Luiz Ivani Araujo, Afonso Pereira, José Pereira, José Belfort de Matos, Escobar Faria (\*\*), A.B. Carneiro de Campos, Capt. Airforce Nelson O. de Almeida, Ivan Lobo de Araujo (gener. secretary) Correio da Manhã Jan.6,62.

from other Bulletins: G. Neidhart (Weltraumbote, Nov. Dec. 61) says: "parties ....philosophies... may be different, without the possibility to meet...(but to get together) this has to be done by man, "since he has a heart". SBEDV agrees and would like to add that diferent opinions, amongst sincere truth searching F.S. research personal, from New Zealand to Zurich, from Rome to Rio, may be even stimulating, but serenety should prevail, since truth, so as the cream of good milk, will come up, at last.

Instead of knowledging the receipt of all that wonderful Bulletins lately, we just mind to focalize some interesting points: C.A. Honey ( Cosm.Science-News-letter,-1231 East Belmont ave, Anaheim, Calif. USA) Calls attention upon

(\*) -Paulo Couto, state repres.(Diar.Not.Aug.9,61) thinks this too expensive. NASA also wants to get an equatorial base for equatorial orbiting satelites and this seems also the desire of Russia as Australia got it known (Jorn.May 16, 62),so it seems dangerous to extend the cold war also to the space over the tropics. Prof.Mario Dias(Diário Not.Ja.14,62)from the astronom.observat.of Valongo-Rio,even goes so far to propose that Brazil should "sell missilery and bombs to countries as Argentina, Portugal, Africa."

(\*\*)-Dr. Escobar Faria(S.Paulo)also is member of the expected secret panel of IBAC (Inst.de Astronautica e Ciencias Espaciais)which assembles in May,1962(Folha 1, ed Mar.3,62) at são Paulo, with others: prof Flavio Pereira (pres), brig.João Adil de Oliveira (exchief of airforce'Secret Service), Carlos Alberto Bacelar (navy), Aurifebus Simões, Dr Olavo Fontes (M.D.) and two USA groups, one of Nicap-Washington, one of APRÓ (C.E.Lorenzen,4145 E.Desert Place, Tucson, Arizona, USA) The industry manager Mario Cintra Gordinho, this time hasn't been mentioned as taking part of the group, for reasons some people know. Also Cel. Aldo Rosa and T.P. Bun this time havn't been mentioned, as taking part at the Secret Congress, but the last only.

scientific findings brought up by the space probes, much earlier also mentioned by G. Adamski (\*) in reports (2 books) about his contacts with spacecrews. Slowly are ceasing the attacks on A.G. possibly after discovering the battering fifth column nature of silencing on the ideological basis of the West ("Liberty and Democracy").

... Gesellschaft für Interplanetarik (Wien 19, Pyrkergrasse 21-Austrich) brings good hints about local F.S. activity even so without details but high technical level and fine austrian humour... APRO Bul.(Sept 61) is getting steadily more "open minded" since it reports about an "Adamski like" contact, unfortunately not with details, but comes to the following conclusion:"...if spacemen are so super-intelligent, why are they not cognizant of this simple historical and psychological fact... whenever we (at APRO) hear of super-intelligence and messianic, compulsions, we should immeditely become suspiscious...". APRO's conclusion may not be accepted by all, but be understood (APRO Bull.Sept.61) Since as a whole we are engagned in (Cold War's) atomic menace and hot "Space" race. A scientist, as APRO's L.J. Lorenzen, engaged in an advanced (perhaps classified) governmental Space project to put a 50-inch reflector diffraction limited telescope in a 24 hour orbit for the U.S.A. National "Science Foundation" may get infected by the political "stress and strain" and pessimism" which englof's our time and people. One may mention by the way, that in the last couple of thousands, hundreds and tens of years, when we have heard of more or less intense F.S. activity, those crew members never tried to "sell"us their "catechism, their technical or economical superiority", so to enslave us, neither did they try in all those years any armed invasion, so when it comes to leave the facts to speak up for themselves, we shouldn't take allways such an obstinate today attitude of "schizoid" suspicion, in relation to "Adamski like" reports. Otherwise, another APRO Bull. Sept.60, is excellent, when it comes to report with great details the "repair of an Ufo in midair" (Boulder-dam-Calif.USA). All research personal should be thankful for such a splendid work done by APRO.

CIPEX e GENA \* \* \*

A new F.S. Soc. "Circulo de amizade Sideral" has been founded (by Elidio Hernandes) At Curitiba (estado de Parana-BRAZIL)-Av. Vicente Machado 1355-Brazil, which studies extraterrestrial life, its crafts...contacts with its crew members...(which) a priori should be wellcomed..". SBEDV wellcomes C.A.S. and opens its pages for any earnest research work which CAS may obtain, in this specific field.

\* \* \*

SBEDV thanks José Lahor Filho and his potent radio-amateur station, which may be of great usefulness to establish contact with Flying Saucer research personal in the brazilian hinterland. I guess we need to establish a radio contact person here in Rio (perhaps by LABRE's ex-president Dr. Paulo Manzo) so that communication to São Paulo's PY 2-CLK gets easier. Come in "P Y 2 - C L K"!!!

\* \* \*

During sensational Flying Saucer flaps, civilian research may be easely supported, by the public but under adverse conditions, only exchange-Bulletins may be edited, when government help could step in, permitting observers in "Space Committees", giving transportations to far away spots, to check F.S. landings and contacts, and also passing valuable, hitherto undisclosed material to free civilian research, keeping so in the country the material, that, sent to foreign secret services, would be temporarily or definitely lost for Brazil and its sovereignty.

(\*) When speed and noise of the bombs' staccato is increasing, when G.A. is checking out (from California) to Mexico's physical and psychological pleasant climate, perhaps this may have some meaning when not all may realize the significance, for his own country.
