Notes Regarding the Recording and Transcription

The *In Pursuit of the Ultimate Frontier* series was remastered from the original ten-inch, reel-to-reel tapes that were recorded at ten inches per second and, thus, required no cleanup. Only occasionally were the following grammatical touches needed.

Textual Editings

- All punctuation
- Noun and pronoun agreement (case, number, and gender)
- Verb tense
- Subject-verb agreement
- Article use
- Dividing up of really, really long sentences
- Removal of extraneous and redundant words and phrases
- Creation of the topic titles and table of contents

Audio Remastering

- Tape hiss reduction

Closing	19

In Memoriam

This transcription and the accompanying CDROM is a small tribute to the late Richard Kieninger who devoted his life toward the upliftment of mankind. Calling to the world through the message in his book, *The Ultimate Frontier*, he showed those who were looking for a better way of life how to build and govern the intentional communities of Stelle, Illinois and Adelphi, Texas. The need for a more peaceful and respectful way of life is evidenced by the fact that both these towns are alive and well to this day.

Thank you!

In Pursuit of The Ultimate Frontier

The Nature of Reality

A discussion with
Richard Kieninger

Introduction

CHARLEY JONES: Hello and welcome, once again, to “In Pursuit of the Ultimate Frontier.” My name is Charley Jones. I am your moderator for this series of discussion programs. With us in the studio is Richard Kieninger, author of the book, *The Ultimate Frontier*, written under his pen name, Eklal Kushana. And, it is from *The Ultimate Frontier* that we will take the basis for the discussions that we have on these programs. Good day, Richard, and welcome to the program.

RICHARD KIENINGER: Thanks. How do you do?

CJ: It is so good to have you here again, sir.

Linking Religious and Secular Views

CJ: One of the most amazing things about *The Ultimate Frontier*, at least in my point of view, is that it takes a world-view that is, frankly, unique in my experience. You seem to have successfully welded some kind of unity between the so-called “revealed word,” that the Biblical prophets had a great deal to do with, and modern theories supported by scientific investigation. And, you show how one is really just the other end of the other. They seem to be the same piece of cloth, here. And, for me this is a unique thing; this tie-together. Maybe you want to make a remark or two concerning this viewpoint. Somehow you managed to get them together.

RK: Well, the religious and the secular viewpoints each fill in where the other leaves off. They are very valuable to one another when taken together. I have had many people mention that to me (about the book) that that seems to be the most satisfying thing that they encountered in having read it. I guess we need to see the truth in a more balanced way. Actually, all of this is speculation in the long run. No matter who we are—scientist or religionist—who knows for sure what happens? We cannot know. There is no record. Nobody took any video tapes of what went on. So, what we have to deal with is what seems rational? What answers most of the objections? And, I think that *The Ultimate Frontier* has one of its most valuable aspects in that it does present a view which can be approached from the purely rational side, and provides a way to clear away some of the prejudices.

The Brotherhoods’ Theory of Particle Physics

CJ: Indeed. And, at least from my point of view, the world-view that you adopt as your basis for dealing with or relating to

your reality really determines so much of what you will be able to accomplish. I know that the Egyptians were very aware, oddly enough, although its relatively a new discovery to our archeology, that the ancient Egyptians were quite aware of the nutational wobble of the Earth. And, you make the statement that all physical particles, whether they are earth-size or subatomic, nutate or wobble at the same rate. I found that rate was an interesting use of terms here, because it does not involve speed; it involves size and ratio. Maybe you could give us a quick explanation of nutation which itself was new word to me.

RK: It has been around for a long time and if you were into the physical sciences to any extent you would find there are about four different entirely unrelated phenomena which are referred to as nutation. It depends upon what your discipline is which of these you use. Most of these things are pretty esoteric terms. Nutation is a motion which relates to the very finest, smallest particles that are available—protons, electrons. I really do not know that I can draw a precise picture of what nutation is, but let me present some analogies that might give you an idea. For instance, the axis of a top that is spinning will have a slight wobble which rotates slowly in a direction opposite to that as the top's spin, and that is called the precessional wobble. As you mentioned before, the axis of the Earth has a precessional wobble that takes about 26,000 years to complete one cycle. Now we see a top and the Earth as a solid body, but when we really get down to the subatomic level of electrons, protons and photons of electromagnetic energy, they are not solid at all. These tiny so-called particles are but swirls of energy. They are really just eddies in what we have come to call Basic Energy. Another term for Basic Energy is the ether, which acts like a non-particular, frictionless

fluid. Perhaps it would be an over simplification but, if you could, visualize a photon as one of these tiny donut shape eddies in space. As it travels through space, at the speed of light, it runs up against an inherent barrier in the ether from which it is formed. The net result is that the photon is annihilated into a wave-form which spreads out into a wave of electrical force in one plane of polarization and as a magnetic force which spreads in another plane that is 90° to the electric wave. These two waves then collapse back in upon themselves to form the donut-shaped ring again.

And, it chatters along through space in this way by alternating rapidly between a ring-shaped particle and the electro-magnetic wave form. And, it can do this for billions of years until something interrupts it. The higher the energy that originally drove the photon, the more frequently it bucks against the upper speed limit imposed by the ether; giving the photon wave a higher frequency and a shorter wavelength. Are you getting a picture from that?

CJ: Yes and what you are saying to me—and this is new information for me—that this chatter is the actual noise made by a quantum particle bucking the speed of light barrier.

RK: I do not know that there is any sound involved with that. It is a phenomenon of wavelength by which we can measure in angstrom units and wavelength, which is the inverse of that.

The Seven Planes of Existence

CJ: Well, this is an aspect of universal structures that we are discussing here that I would really like to get into. You talked

about Seven Plane of Existence in *The Ultimate Frontier*, and you say that the various planes consist of atoms and quanta and that each plane is differentiated from the others by a difference in nutational rate such that the lowest plane can be perceived by anyone or anything composing atoms or matter of a higher plane—

RK: An intelligence can perceive it, yes.

CJ: Well, I am sure we are about to run off in all directions from someone who has not read the book yet. Why don't you give me a little general description of the Seven Planes of Existence.

RK: Well, in the first place, no scientific instrument on the physical plane can detect or measure the presence of the higher Planes of Existence. Atoms and energy of one nutational rate are not *en rapport* with those of a different nutational rate. And, as much as the nerves composing man's five physical senses are made of atoms of the same nutational rate as those of any other physical instrument, these senses are also unable to perceive the higher planes. However, certain powers inherent in Mind can provide the means whereby the upper planes may be seen.

CJ: Richard, the implications of those things really open up an entirely new view of reality. As we have said before, it seems to link what metaphysics says on the one hand and what our empirical science is saying on the other.

RK: Right. And, to draw on both of those sources to get the true picture of what is actually happening—

CJ: What a mind blower.

RK: Clairvoyants have been saying this for a long time because that is what they have seen. That is the instructions that they receive from those whom they contact on the higher planes and so, therefore, when you have this picture, things begin to fall into place; where just before they were a mysterious jumble and you could not make a great deal of sense out of it.

The Four Bodies of a Human

RK: Actually, a man who is incarnate, consists of four bodies at the same time and place. And, since there is comparably large distances between molecules of man's four bodies, each on different plane of existence, readily interpenetrate one another. They do not interfere with one another, since they have different nutational rates which, of course, do not inter-react.

CJ: You are saying that a human being has four—actually four—bodies. Not just one?

RK: Correct.

CJ: And they simultaneously occur in same space?

RK: Right.

CJ: And because of their relatively large amounts of space, in any given atomic structure, there is plenty of room for all that to go on.

RK: The actual distance between atoms is tremendous. It is almost about the same as from one solar system to another solar system.

CJ: A physics professor, that I had once, compared the universe to an atom. He said if you could see a singular atom at the scale that you are perceiving the solar system on, that the Sun would be the nucleus and the closest electron would be Pluto—the closest one.

RK: Ten times further out than Pluto.

CJ: Maybe you had better give us a rundown of the four bodies and, more or less, how the thing is set up.

RK: Well, of course, a man's physical body on the first plane is the slowest nutational rate.

CJ: That is the physical plane in our day-to-day existence that we are discussing.

RK: Right. That is the one we all know about. There is an etheric pattern on the Second Plane which is known as the Vital Body. This acts as a binding force that holds together the physical body.

CJ: Keeping the body recognizable from day-to-day even though there are new cells?

RK: Yes. Some cells only last about two weeks. You will have a complete change-over of every cell in your body every seven years. And, the only ones that really seem to be lasting for any length of time are the nerves and the bones. And this, incidentally, also accounts for the effect of wound healing. Why do they pull together into a certain shape again? I have seen people with hands

that are badly mangled in heavy machinery without any great effort at all to recreate some sort of cosmetic therapy on that hand. First, let it heal to see what you get. In many cases, it is perfectly normal after a year without having to intervene at all, surgically.

CJ: There have been a number of cases where people sever digits and without bothering to clean them simply pressed they severed digit back against the stump until they got to a hospital. There were amazing amounts of adhesion in several cases.

RK: And, probably nothing had to be done other than putting the bandage on.

CJ: That right. Just some structural stitching to hold it on there. Amazing.

RK: And yet scientists have not, for the most part, detected what that source is or what is the force or energy that holds things together. At any rate, that is the first two bodies. Then third, he has an Astral Body which is on Third Plane of Existence. Astral is just one of several names that possibility could be applied to that.

CJ: Is this the same term that is common in the various Eastern philosophies?

RK: Yes, it is. And, I borrow for the reason that English language does not have a good name for it. Then there is the Mental Body on the Fourth Plane of Existence which is where Mind power stems from.

CJ: As we discussed in our first show.

RK: And, of course, the phenomenon of telepathy occurs on the Fourth Plane. Mental energy, incidentally, does not follow the same laws as the energy that is on the physical plane, by any means. There is a whole new ballgame involved with that. Time does not have an influence on mental energy.

Physical Matter Is Formed on the Etheric Plane

CJ: So, you are saying that the physical plane is the only place where the rigid structuring of time occurs?

RK: Correct, but also on the Second Plane.

CJ: There is a relationship to that?

RK: Right, all the binding forces occur on the Second Plane of Existence, and the physical plane has to correspond to it.

CJ: One might say, “Much of the causality that we observe on the physical plane is actually engendered on the Second, and the physical plane is just the effect of such?” Is that roughly correct?

RK: Correct. The Etheric Plane is approximately two thousand times denser than the physical plane. In other words, in a given cubic measure—let’s say a cubic centimeter or a cubic inch—there are about two thousand times as many atoms on the Etheric Plane as there are on the physical plane. And so, therefore, the patterns which are created on the etheric Plane have a very strong influence on what happens with the physical.

What Do Humans Do on the Astral Plane?

CJ: One of the things you talked about in *The Ultimate Frontier* was that on the three planes that are directly above the physical existence plane—the one where we have our existence on here—that there are humans on these next three upper planes also.

RK: Right.

CJ: What are they doing?

RK: Well, human intelligence is the same on the physical plane as on the higher planes of existence. Whatever concepts you hold here, whatever your character is, is still the same when you are functioning without a body on the Astral Plane, for instance. But, the whole object, of course, is to evolve one's perception of the Universe until you have a true knowledge of what is going on. Not just those things which work for you, but which is ultimately recognized by everyone as being the perfect answer to every question that there is; whatever those questions may be. There always an ultimately correct answer.

CJ: That is news to lot of people that truth can be known—a complete and ultimate truth, not just which you need to get you around the block, but what gets you through your entire lifetime.

RK: And beyond.

It is the purpose of man to start out on the physical plane in order to learn everything that there is to know here. And then, eventually, work his way up to the Seventh Plane. That all takes a very long time, for there are many lessons to be learned. After

one has learned everything there is to know on the first four planes of existence, as a human being, the next step up from there is to go into Angelic existence. No human being from this planet has ever become an Angel. Angelic intelligences create planets and evolve life, step-by-step, through a conscious evolutionary process, that is under Their complete control. Archangels, on the other hand, have a job of creating matter and mentally holding together the physical universe. Archangels exist on the Sixth Plane of Existence. Those on the Celestial Plane, which is the highest or Seventh Plane, are involved with more esoteric matters like creating new Egos or forming and maintaining the laws that govern the universe and actually organizing the formation of galaxies.

CJ: Why don't you just repeat the Seven Planes of Existence and the names and associations applied to each?

RK: The lowest plane is the physical plane and the next one up is the Etheric Plane on which exist the vital bodies of plants and animals. The third plane is the Astral Plane, where human Egos reside when they are not on this Physical Plane, living in a physical body where so-called heaven and hell exist, although they are different mental aspects of the same place. Heaven and hell are not some place above or below the Earth. Human spirits who are operating on the Astral Plane are around us. Most of us are just unable to perceive them, but they can see us all the time. As a matter of fact, there is nothing that you can do that is not likely to be observed by somebody, on some level of higher intelligence or just decarnate human beings.

CJ: Kind of like Santa Claus?

RK: Yes, except the gifts are hard to come by. Astral bodies are not of the same nutational rate as physical bodies. There is no rapport between these two forms of matter. The next higher plane is the Mental Plane, which is where those human beings who have learned everything in the first four planes work and reside while they wait to move on to the Angelic Plane, which is of the fifth nutational rate. The Sixth Plane is the Archangelic and the highest is the Celestial.

Perceiving the Higher Planes

CJ: Without being able to perceive the upper planes except through extreme practice and knowing that they are there and knowing what you are looking for, is kind of like going to look for a light in the dark room. You have to know where the switch is to get the light on. How did anybody ever find out about the existence of the higher planes?

RK: It is one of the powers inherent in Mind that we would be able to perceive planes beyond the physical. Human beings have the use of Mind on this physical plane, and it is within the mental potentials of every one of us to be able to contact persons on the Astral Plane. That is just suppose to happen naturally. Our culture tends to block that because it makes us generally not to believe that. It is not accepted in our culture—Christian theology or scientific philosophy. Whereas persons in more primitive cultures do it naturally. Nobody has told them they cannot contact people in the Astral Planes, so they just go ahead and do it anyway.

CJ: Why don't you footnote that with an example of some sort?

RK: Well, for instance there are several non-technical cultures in the Philippines. And a man there named Tony Agpaoa is very well-known by Americans for his abilities as a psychic surgeon.

CJ: Hold it. A psychic surgeon?

RK: Yes. He is a person who is able to open the body and remove diseased portions, for instance, just as regular surgeon would do, yet he uses no instruments of any sort. He just uses his hands.

CJ: He spreads the skin apart with his hands?

RK: Yes. And reaches right in and does not need to worry about antiseptics or anesthesia.

CJ: How incredibly direct. I am sure that medical people would love to hear this?

RK: No. As physicians, they are not too keen on promoting the idea. But, nevertheless, his work has been photographed while he was doing such operations, such as open heart surgery or removal of tumors without any medical instruments.

CJ: I am curious. To what does he attribute this ability? Is he educated at all?

RK: Well, he is a medium. I have met the man and I have spoken with him. He states, of course, that his skills belong to his spirit guides, who are human Egos who were physicians when they had been incarnate. I have actually watched one of his operations,

and I personally know several of his patients and examined photos of their operations.

CJ: And, the effects last and are not detrimental?

RK: He warns that people should change their mental attitude because he feels that most diseases are caused by people's thinking about the disease or thinking negative thoughts, either about themselves or about other people, and this tends to bring on a disease condition.

CJ: So, obviously there are people on this planet who are aware of the full range of human ability that are not in any way limited by negative thoughts or prescriptive predispositioning of their society through education.

RK: Yes. We do not hear much about them in our western civilization, however, because they just cannot get published. There are a few houses that will publish such information, but, generally speaking, they have already catered so much to a lunatic fringe of occultism and metaphysics that most people discount just about anything that is published by them other than people who are into metaphysics.

Creation of a Solar System

CJ: A while back we were talking about Angels and Archangels. We talked about being able to create great clouds of hydrogen in space that were probably left over from the Big Bang or whatever theories you subscribe to. If they do not exist, *per se* here on the physical, how do they go about this creation?

RK: Purely mentally. The physical creation begins with Archangels and, of course, they have to operate within the laws that are established by God on the Celestial Plane. They create hydrogen and they mentally manage to gather this hydrogen together into one area which is a primordial star. As gravity keeps pulling these hydrogen atoms closer and closer together, just on the basis of physical laws, they begin to heat up until they finally reach a temperature where atomic fusion begins—conversion of hydrogen into helium. This produces an atomic furnace, as it were, in which all the rest of the natural elements are created.

CJ: The elements for that solar system?

RK: For that solar system. Then, in the process of the star getting more and more condensed, it still manages to retain a sort of an angular momentum, and the speed gets higher and higher. It turns out to be a flattened sphere and much matter peels out from the equator of the star as it spins. The gases and dust, and what have you, are the materials that are spewed out into space are gathered up by the Angelic Intelligences, and consolidated into planets. They decide what the chemistry is going to be of each of those planets depending upon the distance away from the energy source of the star and what kind of life forms they plan to work. We happen to use the carbon-oxygen system in this planet, but not all others planet do.

CJ: Apparently not.

RK: Because the temperature ranges vary such that that would not work out for them. But, the human Egos that are installed in those bodies are still the same, so the human experience essentially is the same wherever you go in the universe.

CJ: Wow! A common denominator there?

RK: All Egos are created equal, wherever they may be found in the Universe.

CJ: I can see right now, that the stars were created in place by higher intelligences and not the result of some big bang or whatever. What kind of thoughts do you have on the Big Bang theory?

RK: Of course, I have heard of the Big Bang theory, and I have read up on it quite a bit. But, that is just one theory to which about maybe half of the astronomers subscribe. It has been calculated that if all that matter in the universe, where those started out in one place, the gravitational pull would have been so great that nothing could have ever escaped from it.

CJ: So, what we are driving at here, basically, is a steady state concept of universe, right?

RK: Yes, everything was created in place and stays in place. The Tired Light theory states that light loses more energy the farther it travels due to continual absorption of its energy as it travels through gravitational and magnetic fields. This is what causes the light to degrade towards the lower energy; the red end of the spectrum. And, a steady state concept of the universe is beginning to gain more momentum in physicists' thinking.

CJ: You mentioned a moment ago that atomic hydrogen is created by higher intelligence. Now does this just pop out of empty space when someone thinks about it in the proper frame of mind?

RK: Well, to begin with space is definitely not empty. What we call a vacuum actually consists of Basic Energy which does not happen to have any of the eddies that comprise matter and energy on all the planes. There have recently been some pretty amazing observations in nuclear physics which point out this fact. One instrument that physicists use to track subatomic interactions is a vapor-filled box called a bubble chamber. As subatomic particles travel through it, they leave vapor trails and trajectories and branching of the trails from the collision or interaction of the particles. That pretty much tells a trained observer what that reaction is. And, of course, they photograph these things to have a permanent record of them.

But, physicists have noticed that now and then a network of trails would show up, which began and ended completely inside the bubble chamber. They call these vacuum patterns: when a group of particles appears spontaneously from the space inside the bubble chamber, and then annihilate themselves. The Universe is somehow constructed so that space is always just on the verge of giving raise to photons of energy and matter. The mental power of the Creators of the universe is all that is needed to tip that balance in order to generate atoms and another particles out of the raw Basic Energy. It seems pretty likely that man will probably learn soon how to tap this source to provide future motive force rather than continue the use of fossil fields or nuclear energy.

CJ: Richard, we have been dealing with a real large frame of time here. We were discussing primordial star and the precipitation of its elements into planets, and so forth, by Angelic and Archangelic intelligences. Now, even though we can talk about it in just a few words, this takes many, many years, eons in

some cases. And, you say that these are formerly human intelligences that are now working at a higher level directly with and co-creating with God. How is that they do not get bored? I guess time has to be different for them?

RK: Yes, billions of years would be very difficult to take, otherwise. Well, as I said before, not all the other Planes of Existence are subject to time, even though the physical plane is. For instance, electro-magnetic energy radiating from a point all across space is diminishing in proportion to the inverse of the distance, squared. But, mental energy is not subject to that law even slightly. Angels just do not perceive time in the same way that we do. For instance, on the highest plane—the Celestial Plane—there is no future or past. There is no concept of what will be or has been. Everything is. Everything exists simultaneously on the Celestial Plane. On a mental level, all events that occur send signals that travel forward and backward in time, which, of course, allows people who are able to prophesise to be aware of history as it occurs in the future.

CJ: So, it takes the advance skills to intercept these signals in a way that is meaningful?

RK: Right.

CJ: Do modern physicists say something about anti-matter in there; about anti-matter traveling backward in time? Do they do say something about that?

RK: Yes. True. Paul Dirac definitely stated that there is as much matter as antimatter created every time one or the other is created.

And common matter—everyday matter that we are aware of—is traversing forward through time and antimatter is traversing backward in time.

CJ: Well, what about—

RK: Or maybe it is the other way around.

CJ: How about a result preceding its cause then?

RK: It is not possible for an effect to precede its cause.

Closing

CJ: Well, I see that our effect has indeed not preceded our cause, but our time seems to be getting a bit skinny here. It is been a thought-provoking subject, Richard.

RK: Good. I always like to stir up people's brains.

CJ: I will say thank you very much, and I will see you here again next week.

RK: Thank you. I will definitely be here.

CJ: All right.

It is the purpose of man to start out on the physical plane in order to learn everything that there is to know here and then eventually work his way up to the Seventh Plane. And that all takes a very long time for there are many lessons to be learned. After one has learned everything there is to know on the first four planes of existence, as a human being, the next step up from there is to go into Angelic existence. No human being from this planet has ever become an Angel. Angelic intelligences create planets and evolve life, step-by-step, through a conscious evolutionary process, that is under Their complete control. Archangels, on the other hand, have a job of creating matter and mentally holding together the physical universe. Archangels exist on the Sixth Plane of Existence. Those on the Celestial Plane, which is the highest or Seventh Plane, are involved with more esoteric matters like creating new Egos or forming and maintaining the laws that govern the universe and actually organize the formation of galaxies.

How did anybody ever find out about the existence of the higher planes? It is one of the powers inherent in Mind that we would be able to perceive planes beyond the physical. Human beings have the use of Mind on this physical plane and it is within the mental potentials of every one of us to be able to contact persons on the Astral Plane. That is just suppose to happen naturally. Our culture tends to block that because it makes us generally not to believe that, it is not accepted in our culture—Christian theology or scientific philosophy. Whereas persons in more primitive cultures do it naturally. Nobody has told them they cannot contact people in the Astral Planes so they just go ahead and do it anyway.
